

TRIOS CYBER

Internship Roles, Responsibilities & 100-Point Performance Evaluation Framework

1. Internship Objective

The TRIOS CYBER Internship Program is designed to provide students with practical exposure to cybersecurity, industry-oriented tools, technical assignments, professional practices, and project-based learning.

The internship is not limited to attendance or certificate completion. Students are expected to actively participate, complete assigned activities, develop practical skills, maintain professional conduct, and demonstrate continuous improvement throughout the program.

2. Roles & Responsibilities of Interns

Attendance & Punctuality

Students are expected to attend all mandatory live sessions, workshops, mentoring sessions, assessments, and other scheduled activities. Interns should join sessions on time, remain present throughout the session, and follow the prescribed attendance process.

Active Participation

Students should actively participate in technical discussions, quizzes, polls, activities, Q&A sessions, and practical demonstrations. Asking meaningful questions and showing curiosity will be considered part of active learning.

Tasks & Assignments

All assigned tasks must be completed within the given deadlines and submitted according to the required format. Students are expected to understand the task, perform the work independently, provide required evidence, and implement feedback wherever necessary.

Practical & Hands-on Learning

Students are expected to actively practise cybersecurity concepts through authorized labs, tools, simulations, and technical exercises. The objective is not simply to complete a lab but to understand **what was performed, why it was performed, how it was performed, and what the results indicate.**

Certifications & Self-Learning

Students may be required or encouraged to complete relevant cybersecurity certifications, courses, or learning programs. Valid proof of completion may be required. Students are also encouraged to explore topics beyond the mandatory curriculum.

Final Project

Students are expected to complete the assigned final project with proper planning, research, technical implementation, testing, documentation, evidence, presentation, and explanation. Students should be able to confidently explain and defend their own work.

Documentation & Reporting

Students should maintain proper documentation of their practical activities, assignments, findings, projects, and learning outcomes. Reports should be technically accurate, clearly structured, and professionally presented.

Professionalism & Communication

Students must maintain professional communication with mentors, coordinators, trainers, and fellow interns. They are expected to follow instructions, respect deadlines, respond to official communication, and maintain appropriate professional behaviour.

LinkedIn Professional Development

Students are expected to build a professional online presence. Where applicable, they should add their TRIOS CYBER internship role to their LinkedIn profile using accurate and professional information.

LinkedIn Internship Post

Students may be required to publish a professional post regarding their internship, learning experience, or technical development. The post should reflect genuine participation and maintain professional standards. Likes and comments will not determine the score.

Integrity & Ethical Conduct

All submissions must be original. Students must not submit copied work, fabricate evidence, misrepresent project results, or claim work performed by someone else. All cybersecurity activities must be conducted only within authorized environments.

Initiative & Collaboration

Students are encouraged to go beyond mandatory requirements by conducting additional research, contributing useful resources, participating in discussions, collaborating with peers, and demonstrating initiative in their learning.

3. Internship Performance Evaluation — 100 Points

The student's overall performance will be evaluated through the following criteria:

Evaluation Criteria	Weightage
Live Session Attendance & Punctuality	10 Points
Active Participation & Engagement	5 Points
Tasks & Assignments	10 Points
Practical Labs & Hands-on Activities	15 Points
Certifications & Self-Learning	5 Points
Final Project & Technical Deliverables	20 Points
Documentation & Technical Reporting	5 Points
Professionalism, Communication & Discipline	5 Points
LinkedIn Profile & Internship Role	10 Points
LinkedIn Internship/Learning Post	10 Points
Initiative & Collaboration	5 Points
Total	100 Points

4. How Students Can Earn Their Points

Live Sessions — 10 Points

Points will be awarded based on consistent attendance, punctuality, presence throughout the session, and compliance with session requirements.

Participation — 5 Points

Students can earn points through meaningful questions, answering technical questions, participating in quizzes, polls, discussions, group activities, and demonstrating active engagement.

Tasks & Assignments — 10 Points

Points will depend on task completion, technical accuracy, quality of submission, originality, timely submission, and implementation of mentor feedback.

Practical Labs — 15 Points

Points will be based on successful completion of authorized labs, correct use of tools, technical understanding, troubleshooting, practical implementation, and submission of appropriate evidence or documentation.

Certifications & Self-Learning — 5 Points

Students can earn points by completing assigned or approved cybersecurity certifications, courses, assessments, and relevant self-learning activities, along with valid proof wherever required.

Final Project — 20 Points

The final project will be evaluated based on topic understanding, planning, methodology, technical implementation, problem-solving, results, documentation, presentation, and the student's ability to explain their work.

Documentation — 5 Points

Students will be evaluated on the quality, accuracy, structure, clarity, and professionalism of their technical reports, lab documentation, project documentation, and evidence.

Professionalism — 5 Points

Evaluation will include communication, discipline, responsiveness, punctuality, following instructions, meeting commitments, and professional conduct.

LinkedIn Profile — 10 Points

Points may be awarded for correctly adding the TRIOS CYBER internship role, maintaining an accurate internship description, presenting relevant skills, and maintaining a professional profile.

LinkedIn Post — 10 Points

Points will be awarded for publishing a professional and genuine internship/learning post that appropriately reflects the student's experience and development.

Initiative & Collaboration — 5 Points

Additional points may be awarded for demonstrating initiative, supporting team members, contributing useful resources, participating beyond mandatory requirements, or showing exceptional improvement.

5. Performance Levels

Final Score Performance Level

90–100	Outstanding
80–89	Excellent
70–79	Good
60–69	Satisfactory
50–59	Needs Improvement
Below 50	Very Poor

6. Key Principle for Students

Students should understand that **performance is measured by consistency, quality, practical application, and professional behaviour—not simply by completing the minimum requirements.**

A strong internship performance can be achieved by following:

ATTEND → PARTICIPATE → LEARN → PRACTISE → COMPLETE → DOCUMENT → CERTIFY → BUILD → PRESENT → IMPROVE

“Do not complete the internship merely to receive a certificate. Complete it to become more skilled, more confident, and more industry-ready than when you started.”
