

Day 1 Task - FTK Imager Installation & Forensic Imaging

Trios cyber • 2 Sept (Edited 10 Sept)

100/100 | Due 3 Sept, 20:04

Practical Assignment: FTK Imager Installation & Forensic Imaging

Dear Students,

For this practical assignment, you are required to install FTK Imager and use it to create a forensic image of either:

- A local/physical drive such as C or D drive
- OR
- A specific folder on your computer.

The objective of this exercise is to familiarize you with the basic process of forensic acquisition using FTK Imager and to document the procedure clearly with appropriate screenshots.

Part 1: Install FTK Imager

1. Download and install FTK Imager from the official Exterro/FTK download page.
2. Complete the installation on your computer.
3. Launch FTK Imager and verify that the application opens successfully.

Official download page: <https://www.exterro.com/digital-forensics-software/ftk-imager>

Part 2: Select the Evidence Source

You may choose ONE of the following options:

Option A – Local/Physical Drive

- Select a local physical drive available on your computer.
- Do not modify, delete, rename, or otherwise alter any files on the source drive.

Option B – Folder

- Create or select a sample folder containing a few files and/or subfolders.
- Use this folder as the source for the imaging exercise.

For this assignment, use only data that you are authorized to access. Do not image another person's priva

data or any confidential/sensitive information.

Part 3: Create the Image

Open FTK Imager and perform the appropriate imaging procedure.

For a drive-based image, use the relevant option under:

File → Create Disk Image

Select the appropriate source type, such as Physical Drive or Logical Drive, depending on what you are imaging.

For a folder-based exercise, add the folder as an evidence item and use the appropriate logical/custom image option to create the image.

Follow the FTK Imager prompts to:

1. Select the source.
2. Select the image/output format offered by the application.
3. Enter the requested evidence information.
4. Select a suitable destination folder for the image.
5. Provide an appropriate image filename.
6. Start the imaging process.
7. Allow the process to complete successfully.
8. Where available, use the Verify images after they are created option and document the verification result.

FTK Imager documentation specifically provides procedures for adding drives or folders as evidence and creating logical/custom images.

Part 4: Document Your Work

Prepare a PDF or DOCX report documenting the complete procedure.

Your report must include:

1. Student Information

- Name
- Course/Subject
- Assignment Title
- Date

2. Software Information

- FTK Imager name
- Version installed
- Operating system used

3. Step by Step Procedure

Explain the complete process you followed, from installation through successful image creation.

4. Screenshots

Include clear screenshots showing the important stages of the process, such as:

- FTK Imager installation
- FTK Imager successfully opened
- Selection of the evidence/source
- Selected drive or folder
- Image creation settings
- Evidence information, where applicable
- Image destination and filename
- Imaging/acquisition progress
- Completed image
- Verification/hash result, where available
- Final output/image files

Each screenshot should have a short caption explaining what it demonstrates.

5. Result

At the end of the report, state:

- What source you imaged (drive or folder)
- Image format created
- Location where the image was saved
- Whether the imaging process completed successfully
- Verification/hash result, if available
- Any problems encountered during the process

Submission Requirements

Submit ONE file only:

- PDF (.pdf) OR
- Microsoft Word document (.docx)

The report must contain both written steps and screenshots. Screenshots alone will not be considered a complete submission.

Please ensure that:

- Screenshots are readable and not unnecessarily cropped.
- Steps are presented in the correct order.
- The report is properly formatted.
- Your name and student information are included.
- The submitted file opens correctly before you upload it.
- Do not submit the actual forensic image file unless specifically instructed by the instructor.

Important Notes

Use only a test folder or drive/data that you are authorized to examine. Do not alter or delete data from the source during the exercise.

For a folder-based image, remember that this is a logical acquisition of the selected files/folders rather than a complete physical forensic image of the storage device.

Expected Learning Outcome

After completing this practical, you should be able to:

1. Install and launch FTK Imager.
2. Identify an appropriate evidence source.
3. Add a drive or folder as an evidence item.
4. Create an appropriate forensic/logical image.
5. Understand the basic purpose of evidence information and verification.
6. Document a forensic acquisition procedure using screenshots and clear technical steps.

Submission: Upload your completed PDF/DOCX report to this Google Classroom assignment before the specified deadline.

Please read the instructions carefully before beginning the practical.
