

Day 2 Task - Forensic Image Examination & Metadata Analysis

Trios cyber • 3 Sept (Edited 6 Sept)

100/100 | Due 4 Sept, 22:00

Practical Assignment: Forensic Image Examination & Metadata Analysis

Dear Students,

For this practical assignment, you are required to use FTK Imager to examine the forensic image created during Task 1.

The objective of this exercise is to familiarize you with the basic process of forensic image examination, file and folder analysis, and metadata examination using FTK Imager. You will also identify potentially relevant digital evidence and document your observations with appropriate screenshots.

Part 1: Load the Forensic Image

1. Open FTK Imager on your computer.
2. Load the forensic image created during Task 1.
3. Verify that the image is successfully displayed in FTK Imager.
4. Examine the available evidence/image information.

Record the following information, where available:

- Image filename
- Image format/type
- Source information
- Image size
- Available hash or verification information

Part 2: Examine the Disk Image

Explore the contents of the forensic image.

Examine the available:

- Evidence/image information
- File-system information, where available
- Folder and directory structure
- Files contained within the image

Navigate through the available folders and files and observe how the evidence is organized.

If partition or file-system information is not available for your particular image, mention this in your report as “Not Available.”

Take clear screenshots showing the relevant image and directory information.

Part 3: Examine Files and Metadata

Select at least 3-5 files from the forensic image for detailed examination.

For each selected file, record the available:

- Filename
- File path/location
- File size
- Created timestamp
- Modified timestamp
- Accessed timestamp, where available
- File attributes, where available
- Other relevant metadata, where available

Take clear screenshots showing the file information and metadata of the selected files.

Part 4: Identify Relevant Digital Evidence

From the files and information examined, identify at least 3 items that could be relevant to a digital forensic investigation.

For each item, provide:

- Name/path of the item
- What you observed
- Why it may be relevant to an investigation

Your explanation should be based on the information available in the forensic image. Do not make unsupported conclusions.

Part 5: Examine Timestamps

Compare the available timestamps of the files you selected.

Based on the Created, Modified and Accessed timestamps, describe any observable sequence of activity.

Clearly distinguish between:

- What the evidence directly shows
- What you infer from the available evidence

Take appropriate screenshots to support your observations.

Part 6: Document Your Work

Prepare a PDF or DOCX report documenting the complete examination procedure and your findings.

Your report must include:

1. Student Information

- Name
- Course/Subject
- Assignment Title
- Date

2. Evidence/Image Information

- Image filename
- Image format/type
- Source used in Task 1
- Image size
- Available hash/verification information

3. Step-by-Step Procedure

Explain the complete process you followed, from loading the forensic image through examining its contents, files and metadata.

4. Screenshots

Include clear screenshots showing the important stages of the process, such as:

- FTK Imager opened
- Forensic image loaded
- Evidence/image information
- Image structure
- Directory/folder structure
- Selected files
- File information and metadata
- Timestamp information
- Identified evidence items
- Hash/verification information, where available

Each screenshot should have a short caption explaining what it demonstrates.

5. File Metadata

Include the metadata/details of at least 5 selected files.

6. Findings

Include at least 3 potentially relevant evidence items and explain why each may be relevant.

7. Timestamp Analysis

Describe any observable sequence of activity based on the available timestamps.

8. Result

At the end of the report, state:

- Whether the forensic image was successfully loaded and examined
- What information was available from the image
- What files/folders were examined
- Important metadata observations
- The 3 potentially relevant evidence items identified
- Any problems or limitations encountered during the examination

Submission Requirements

Submit ONE file only:

- PDF (.pdf) OR
- Microsoft Word document (.docx)

The report must contain both written steps and screenshots. Screenshots alone will not be considered a complete submission.

Please ensure that:

- Screenshots are readable and clearly show the relevant information.
- Steps are presented in the correct order.
- Each screenshot has an appropriate caption.
- Metadata is recorded accurately.
- The report is properly formatted.
- Your name and student information are included.
- The submitted file opens correctly before you upload it.
- Do not submit the forensic image file unless specifically instructed by the instructor.

Important Notes

Use the forensic image created during Task 1 for this exercise.

Do not modify, delete, rename, or otherwise alter the original evidence/data.

If a particular piece of information is not available in your image, mention "Not Available" in your report.

Use only the information that can be observed from the forensic image. Do not assume or create information that is not present.

Your screenshots and observations must represent your own practical work.

Expected Learning Outcome

After completing this practical, you should be able to:

1. Load and examine a forensic image using FTK Imager.
2. Explore the structure and contents of an acquired image.
3. Examine files, folders and available metadata.
4. Identify potentially relevant digital evidence.
5. Interpret available file timestamps to make preliminary observations.
6. Distinguish between direct observations and inferences.
7. Document forensic examination findings using screenshots and clear technical steps.

Submission: Upload your completed PDF/DOCX report to this Google Classroom assignment before the specified deadline. Make sure to click mark as done after turning it in.

Please read the instructions carefully before beginning the practical.
